Bow Networks Introduces IESO Certified Gateway

CALGARY, AB -- Bow Networks is pleased to announce that its eLAN Universal DNP Gateway has been tested and is certified for operation with Ontario's Independent Electricity System Operator's (IESO) Energy Management System (EMS). This allows Market Participants to seamlessly transfer their real-time information to the IESO Control Center on a timely basis.

The IESO is responsible for managing Ontario's bulk electricity system and operating the wholesale electricity market. The IESO is a not-for-profit corporate entity established in 1998 by the Electricity Act of Ontario. The IESO works at the heart of Ontario's power system, connecting all participants - generators that produce electricity, transmitters that send it across the province, retailers that buy and sell it, industries and businesses that use it in large quantities and local distribution companies that deliver it to people's homes.

Bow Networks is a utility automation company and the developer of the eLAN™ substation integration and automation platform. Bow has been headquartered in Calgary, Canada since 1986.
